Under Review & In Preparation

- **Situating AI Ethics in Language Education: Justice and Autonomy Across Learning and Assessment** *revised and resubmitted*
  with C Wang (first author), International Journal of Applied Linguistics
  – Argues that normative principles and situated ethical practice are complementary in AI ethics: fairness metrics for AI language assessment presuppose what the construct can register of a multilingual learner, datafied personalization reshapes learner autonomy, and institutions deploying such systems owe learners answerability

- **Six Dimensions of Dance Cognition** *in preparation*
  Philosophy of cognitive science article
  – An account of six distinct agent-level abilities engaged in dance — articulated primarily through Black social dance styles — offering dance scholarship a tool for analyzing the thinking in different practices, and cognitive science a detailed map of an activity often invoked to show what mind owes to body

- **Felt, Seen, and Measured** *in preparation*
  Self-assessment, observer perception, and high-speed kinematics of learning a dance phrase
  – Eleven dancers learned a hip-hop phrase from its choreographer and performed it under a four-camera high-speed markerless motion-capture rig; the paper maps where felt improvement, observer judgments, and measured kinematics (deviation, timing, amplitude, predictability) agree and diverge
